Creating the Screening Matrix: Search Committee Chair

A new feature within PAPERS 7 is the ability to create an applicant screening matrix from the information collected by the system. The search committee chair can prepare this matrix ahead of the applicant review and use it to document the progress of candidates during the review process and assist search committee members with the evaluation of the applicants against the minimum/preferred qualification criteria.

1. From the applicant search screen of the posting, select the applicants you wish to export the data of by checking the box next to their name.

4. If you selected the save radio button and clicked ok, The next screen will guide you through locating the place on your computer where you’d like the save the file. When you have identified the appropriate folder, you may name the file and that click the save button.
5. When you open the file in Excel, you will see the applicant data is provided in rows. The system captures the Applicants last name, first name, the applicants status at the time the report was saved, the workflow owner and the last date the information was updated. Using Excel, you could add more columns such as the criteria you are using for screening the applicants for phone interview and your evaluation of how well each candidate met each criterion.
