Before using this guide you should first try using the automated setup application. To access it please connect to AccessODU network and go to http://onramp.wlan.odu.edu/eduroam

This guide is designed for devices for which the automated setup did not work.

Android devices which have been rooted will not be supported by the Technical Support Center, if you encounter problems on a rooted device please restore it to a non-rooted state and try again.

**Manual Setup:**

Pull up the menu and choose ‘Settings’
Click on ‘Wireless & networks’

Click on ‘WiFi settings’
Click on ‘eduroam’

If prompted, setup a password for credential storage on your Android device. This password can be anything you wish to make it and is local to your device.
Configure the settings for ‘eduroam’ as seen in the image.

EAP method: PEAP
Phase 2 authentication: MSCHAPV2

Scroll down in the settings window and enter your MIDAS ID@odu.edu as the identity, anonymous@odu.edu as the Anonymous identity, and your MIDAS password, then click connect.

Congratulations, you should now be connected to eduroam!
