eduroam Wireless
Windows Automatic Setup

To access the automated setup please connect to the AccessODU network and go to
http://onramp.wlan.odu.edu/eduroam

Fully Automatic Setup:

Click ‘I accept the terms of the End User License Agreement’ then click ‘Start’

At the next step it will either launch a Java applet if you have Java installed or use ActiveX if you don’t have Java installed and are using Internet Explorer
If you have Java installed you will see a progress bar while the applet loads.

If it falls back to ActiveX you will be prompted to click the Install button at the bottom of your Internet Explorer window and then the program will load.

Once XpressConnect loads you will be prompted for your MIDAS ID@odu.edu and MIDAS Password then click ‘Continue’.

(Semi-Automatic picks up at this step as well)
Wait while the application configures the settings on your computer for eduroam

If you are prompted you may need to enter your Windows login and password to authenticate the changes being made

Next the application will join the network and verify connectivity
Once connectivity is verified you are now connected to eduroam.

You may click ‘Done’ to exit.

You may also choose to click the link to verify the changes made to your computer or click the link to install a copy of the software on your desktop.

If you click to view the changes made you will see the following window.

You may either click ‘Ok’ to complete setup or click ‘Undo’ to revert the changes made.
If you click to create a shortcut on the desktop it will place a copy of the software on your desktop which can be used to troubleshoot future connectivity (Join the Old Dominion University network) problems and/or revert the changes made at a later time (Undo previous changes)

You do not need this software to connect to the network on a daily basis, Windows will handle that. It will just assist with you with troubleshooting should you encounter problems joining in the future
Semi-Automatic Setup (If Fully Automatic Doesn’t Work):

Click the link for ‘load XpressConnect manually’

Click the link to download the file NetworkWizardLoader.exe and choose to save it

Open your ‘Downloads’ folder and run the program NetworkWizardLoader.exe

From here on you will follow the Fully Automatic steps starting at step 5
