Research Volunteers Needed!!!

Thank you very much for your interest in volunteering for the study. It is a walking study in which I will ask you to walk on a splitbelt treadmill under a few different conditions. The walking part lasts about 35 minutes separated by some breaks. In total, the collection will last around 1.5 hours. All adults (age 18-85) can participate as long as they can walk for 15 at a time with no issues and there is no history of neurocognitive disorders, such as Parkinson or Alzheimer’s, or musculoskeletal disorders such as MS. This study will be using motion capture so markers and wraps will be placed on your lower body as seen below. Please wear athletic shoes to walk in, tight shorts that are above the knee as seen and a top that can be tucked in or comfortable for a wrap to be placed around it (again as in the photo). The study is conducted in our lab located on the ODU campus, 4211 Monarch way.

Thank you again for your interest, this is a huge help and it is much appreciated. Please use the email below if you would like to participate in the study.
