Aerospace Engineering M.E.

Mission:
The Master of Engineering (M.E.) program in Aerospace Engineering will provide an adaptive learning environment to its students while maintaining high ethical, multicultural, and global standards. By empowering its students with the highest-level academics, respect for the dignity of the individual, and practical applications based on critical reasoning in support of the University's mission, the program prepares them for practicing engineering successfully in mid-level positions in the industry or government.

Program Goals:

1. Graduates will be prepared with the technical and practical skills necessary to enter a highly-specialized workforce.

2. Graduates will establish themselves as successful professionals in mid-level engineering management positions in industry or government by conducting themselves consistently in a responsible, professional, and ethical manner.

3. Graduates will demonstrate professional leadership.
