

Addendum I: Two-Year Public Institution

1. Virginia Enrollment Representation Index

In the table below, representation is measured by the percentage of URM students attending a two-year institution minus the percentage of underrepresented minorities in their service area. We have capped the URM in the service area at 30%, which is the percentage of URM in the Commonwealth of Virginia.

How well does URM enrollment reflect the racial/ethnic composition of the service area?

Addendum I: Two-Year Public Institution

Virginia Enrollment Representation Index Continued

- Institutions with a positive score, zero, or within 5 percentage points of Virginia's average are taking a greater responsibility in serving the most underrepresented groups. These institutions are social mobility drivers in the Commonwealth providing opportunities for underrepresented minority students.
- Institutions with negative scores greater than 5 percentage points (> -5) are underserving these racial and ethnic groups and can work to be more reflective of Virginia's population.

Addendum I: Two-Year Public Institution

2. Virginia Opportunity Index

- Historically, two-year public institutions have provided access to Pell students because of their open admission policy, low cost, and geographic availability.
- Nationally, two-year public institutions have underperformed in the area of completion.
- The concern stems from low levels of success outcomes such as graduation and transfer rates.
