Subject: Indirect Cost Allocation Report
For the Six-Month Period Ended December 31, 2008

Attached you will find the Indirect Cost (IDC) Allocation report for the six-month period ended December 31, 2008. This report provides a combined reporting of the two University approved IDC allocation methods currently in use: the Traditional Method and the Non-Traditional Method.

The Traditional Method covers the research activity of regular faculty members working within the capacity of their academic or administrative appointments and projects which are conducted through the Virginia Applied Technology and Professional Development Center (VATPDC). The Non-Traditional Method encompasses the remainder of the sponsored program activity of the University. Projects reported under this model are those of Self-Supporting Research Positions (SSRP), University approved research centers and other affiliated entities for which the Research Foundation provides fiscal and administrative services.

The following are some of the key points in the allocations:

- When compared to the same period in the previous fiscal year, total cost recoveries increased \$1.2 million. Indirect cost recoveries decreased \$250,790 as a result of sponsor mix and an increase in subcontract and participant costs not subject to indirect cost recovery.
- The amount distributed for the Research Foundation's operations is based upon 50% of its approved operating budget for the fiscal year. This cost, net of fees and funding from affiliated activities, represents 38% of total indirect cost recoveries.
- The mandated return to the Commonwealth of Virginia of \$144,482 for the six-month period has been allocated proportionately to the University activity in both allocation models and represents 5% of the related indirect cost recoveries.
- Funding for the Intellectual Property operating budget has been provided at an amount of \$93,279, determined at .5% of total University cost recoveries, and has been allocated proportionately to both allocation models. This represents 3% of indirect cost recoveries.
- The distribution ratio in each allocation model is based upon the relative percentage of each department's or center's indirect cost recoveries to total indirect cost recoveries in the allocation base.
